

**CITRUS MEMORIAL HEALTH SYSTEMS SIGNS AGREEMENT
WITH ACCESS MY RECORDS.COM TO OFFER ON-LINE PERSONAL
HEALTH RECORDS TO MEMBERS, PATIENTS AND EMPLOYEES**

BOCA RATON, FL (May 1, 2008) Citrus Memorial Health Systems headquartered in Inverness, FL has entered into an agreement with Boca Raton based Access My Records.com a leading provider of on-line Personal Health Records (PHR), will provide their Personal Health Records service to all 16,000 Share Club members, 1,200 employees and all patients being discharged from the CMH facilities.

Under this program, scheduled to begin in mid May of this year, all participants will be offered the Access My Records.com Personal Health Records service. There is no cost for the first year to anyone that belongs to the Citrus Memorial Health Systems Network. Each new member can activate their account on-line or by calling a 24/7 customer service operator for those that do not have a computer or internet access.

The AMR on-line service gives each member the ability to store and manage personal health and medical records they receive from any of their physicians or other continuing health care providers. In addition to maintaining personal health records, the service includes useful tools to manage prescription and other vital information. Each month, members are notified of medication renewals. In addition all members will receive a prescription discount card that can be used at over 59,000 pharmacies, saving an average of 55% off brand-name and generic prescription drugs.

“The goal to this program is to help make everyone aware of, and take greater control of their continued healthcare after they leave the hospital, as well as, during their daily life and to be better able to manage the healthcare of their entire family” said Ryan Beaty the CEO of Citrus Memorial Health Systems.

The service also features a special login that allows Emergency Room physician or nurses to access a read only summary report of the latest and most vital information about the member. A nurse would pull up a list of information from the patient’s Medical ID Card that would tell a doctor what your past medical conditions are, what medications you take, your allergies, your health insurance carrier, who to call in your family, the name of your primary doctor, health care power of attorney and more. This gives the doctor the needed information to make a fast and accurate diagnosis preventing medical errors and duplicate testing.

108,000 people died last year from preventable medical errors making this the fifth leading cause of death in the U.S. Yet 93% of those errors could have been avoided if the doctor had vital information about that patient when first being treated.

“Citrus Memorial Health Systems and Access My Records.com are working together to educate and give the people the ability to have Electronic Personal Health Records” said Lenny Tambasco President of Access My Records.com. “Citrus Memorial Health Systems is leading the way in their community by providing a service that assures the best of care in or out of the hospital.”

AMR members receive a credit card type Medical ID Card, Key Tag and Window Decals for your car or home, telling emergency responders that you belong to a Personal Health Records Service. You also receive a Prescription Discount Card giving additional saving to all prescription drug purchases.

Each member is responsible to keep their information updated. This can be done directly through your account, over the internet or by calling a 24/7 customer service operator that will enter the information for you. In addition, images such as x-rays and scans, blood work, insurance policies, wills, trusts, health care power of attorneys and more can be uploaded directly from a PC desktop, or a copy can be mailed and uploaded for you. Because AMR is an On-line web-based service, users can retrieve their records from any Internet-connected computer in the world at anytime.

Information sent in and out of user's accounts is secured by a 256-bit encryption technology; The Access My Records.com portal that sends and receives personal information is using the same technology that handles transactions for Fortune 500 financial and insurance companies. In addition, AMR maintains redundant data in different geographic locations, so that the system is available in the event of an outage or natural disaster.
